SUMMARY

Result-driven Full-Stack Software Engineer with a rock-solid foundation in Backend Architecture (Node.js/Express) and extensive hands-on experience delivering commercial Web Solutions and customized SaaS/CRM systems. Expert in bridging complex server-side performance, zero-trust security (JWT), and responsive, pixel-perfect user interfaces. Deployed multiple high-availability business environments handling real-world clients and production traffic

SKILLS

Programming Languages

JavaScript (ES6+), TypeScript,
Java, Python, HTML5, CSS3

Databases & Storage

- MongoDB
- MongoDB Atlas
- Mongoose (ODM)
- Cloudinary (Media Management)
-

Cloud & DevOps

- AWS (Amazon Web Services): (EC2, S3, IAM)
- RESTful APIs
- Git/GitHub (Version Control)
- Deployment & Server Management

Backend Development

Node.js, Express.js
RESTful APIs, JWT (Authentication)

Tools & Fundamentals

- Git & GitHub
- Data Structures & Algorithms
- OOP (Object Oriented Programming)

PROJECTS

1. Law Firm Management Applications (Commercial Production) 🔗

Tech Stack: Frontend Architecture, Node.js, Secure Data Layers, Production-grade Deployments.

- **Architected and deployed 4 secure, high-performance legal CRM platforms from scratch to streamline case archiving and legal workflow scheduling for real-world client (M. Shaban).**
- **Built intuitive operational dashboards allowing real-time legal log indexing, client session tracking, and fast search performance.**

2 . DevFinder Pro 🔗

Tech Stack: Advanced JavaScript, API Integrations, UI Performance Optimization.

Built an advanced developer search aggregator platform utilizing dynamic front-end data filtering algorithms. Optimized API consumption and rendering performance for an ultra-responsive user discovery experience.

3. Habit Flow Application 🔗

Tech Stack: Interactive Frontend Engineering, State Tracking, CSS Layouts.

Engineered a sleek personal productivity and habit-tracking progressive platform with clean interface flows. Managed client-side state handling and persistent data parameters to guarantee continuous application interactivity.

4. Social Media Platform Backend Engine

Tech Stack: Node.js, Express.js, MongoDB, Mongoose ODM.

Engineered a highly scalable social networking backend managing complex user interaction flows like posts, comments, and nested likes. Designed relational database schemas and lookup pathways utilizing Mongoose and MongoDB for minimized server response times. Applied strict input validation layers and global error handling to maintain high system reliability.

5. Saraha Anonymous Communication Server

Tech Stack: Node.js, Express, JWT, MongoDB Atlas, Cloudinary.

Developed a zero-trust RESTful API for an anonymous micro-messaging solution featuring isolated data validation. Integrated strict token-based authorization and session integrity controls utilizing JSON Web Tokens (JWT). Deployed dynamic multimedia uploads using MongoDB Atlas and automated Cloudinary media pipelines.

EDUCATION

Bachelor of Computer Science

Arab Open University-Egypt

09/2023 – Present

Cairo-Elshrouk

CERTIFICATES

Backend Software Development Diploma (Node.js)

- **Issuer:** Route Academy
- Awarded for completing an intensive professional training program in **Backend Engineering**.
- Mastered **Node.js core modules**, **Express.js**, and building **RESTful APIs**.
- Gained hands-on experience in **NoSQL Databases** using **MongoDB** and **Mongoose**.
- Implemented secure authentication systems using **JWT** and managed media with **Cloudinary**
